Pearson Edexcel Level 1/Level 2 GCSE (9–1)

Time 1 hour 45 minutes

Paper reference **1CH0/1H**

Chemistry
PAPER 1
Higher Tier

You must have:
Calculator, ruler

Total Marks

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
– *there may be more space than you need.*
- Calculators may be used.
- Any diagrams may NOT be accurately drawn, unless otherwise indicated.
- You must **show all your working out** with **your answer clearly identified** at the **end of your solution**.

Information

- The total mark for this paper is 100.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*
- In questions marked with an **asterisk** (*), marks will be awarded for your ability to structure your answer logically, showing how the points that you make are related or follow on from each other where appropriate.
- There is a periodic table on the back cover of the paper.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

Q:1/1/1/1/1/

Pearson

Answer ALL questions. Write your answers in the spaces provided.

Some questions must be answered with a cross in a box ☐. If you change your mind about an answer, put a line through the box ☐ and then mark your new answer with a cross ☐.

- 1 (a) Chemical cells produce a voltage.

A chemical cell can be made by placing the metals copper and zinc in a beaker of sodium chloride solution.

Figure 1 shows a diagram of this chemical cell.

Figure 1

Describe what will happen to the brightness of the light bulb over a long period of time.

(2)

.....

.....

.....

.....

- (b) Copper is a transition metal.

Which of the following is most likely to be a property of copper?

(1)

- ☐ **A** copper forms a white oxide
- ☐ **B** copper has a high melting point
- ☐ **C** copper has a low boiling point
- ☐ **D** copper has a low density

- (c) A copper atom has a diameter of 0.256 nm.

What is the size of this copper atom in metres?

(1)

- ☐ **A** 2.56×10^{-8}
- ☐ **B** 2.56×10^{-9}
- ☐ **C** 2.56×10^{-10}
- ☐ **D** 2.56×10^{-11}

- (d) Brass is an alloy of copper and zinc.

One type of brass contains 70% copper.

Zinc atoms are slightly larger than copper atoms.

Draw a labelled diagram in the box to show the arrangement of copper and zinc atoms in this alloy.

Use the circle in the box as a guide to the size of a copper atom.

(2)

(Total for Question 1 = 6 marks)

- 2 Barium hydroxide reacts with dilute hydrochloric acid to form barium chloride and water.

(a) The equation for the reaction is

Which row of the table shows the correct state of each of the substances in the equation for the reaction?

(1)

	barium hydroxide	hydrochloric acid	barium chloride	water
<input type="checkbox"/> A	solid	aqueous	aqueous	liquid
<input type="checkbox"/> B	solid	liquid	solid	aqueous
<input type="checkbox"/> C	aqueous	aqueous	solid	liquid
<input type="checkbox"/> D	aqueous	liquid	aqueous	aqueous

- (b) A student wanted to investigate how the pH of the mixture changes as barium hydroxide is added to dilute hydrochloric acid.

They followed this method.

step 1 measure out 50.0 cm^3 of dilute hydrochloric acid into a beaker using a measuring cylinder

step 2 use a glass rod to place a drop of the acid onto a piece of universal indicator paper and record the pH

step 3 add 0.2 g of barium hydroxide to the acid in the beaker and stir

step 4 use the glass rod to place a drop of the mixture onto a new piece of universal indicator paper and record the pH again

step 5 repeat steps 3–4 until there is no further change in the pH.

- (i) Name a piece of equipment which could be used to measure out 50.0 cm^3 of dilute hydrochloric acid more accurately than the measuring cylinder.

(1)

(ii) Describe how the pH of the mixture is determined when a drop of it is placed on the universal indicator paper.

(2)

(iii) In the method, universal indicator paper is used to determine the pH.

Explain why litmus paper would not be a suitable indicator to use in this experiment.

(2)

3 Magnesium carbonate has the formula MgCO_3 .

(a) Magnesium carbonate contains Mg^{2+} and CO_3^{2-} ions.

(i) The atomic number of magnesium is 12.

What is the electronic configuration of the Mg^{2+} ion?

(1)

- ☐ **A** 2
- ☐ **B** 2.8
- ☐ **C** 2.8.2
- ☐ **D** 2.8.4

(ii) Explain why solid magnesium carbonate cannot conduct electricity but solid magnesium can.

(3)

.....

.....

.....

.....

.....

.....

(b) Calculate the percentage by mass of magnesium in magnesium carbonate, MgCO_3 .

(relative atomic masses: C = 12.0, O = 16.0, Mg = 24.0)

(3)

.....

.....

.....

.....

percentage by mass of magnesium =

- (c) Magnesium carbonate reacts with dilute hydrochloric acid.
Water and carbon dioxide are two of the products of the reaction.

Complete the balanced equation for this reaction.

(1)

(Total for Question 3 = 8 marks)

4 Sucrose is a carbohydrate.

When a solution of sucrose is fermented using yeast, ethanol is formed.

(a) In one experiment, 100.00 g of sucrose was dissolved in water.

Yeast was added and the mixture allowed to ferment until no more bubbles of carbon dioxide were seen to be formed.

The ethanol was obtained from the mixture and its mass determined.

The results are shown in Figure 3.

	mass in g
mass of sucrose	100.00
mass of ethanol obtained from the reaction	8.07
theoretical mass of ethanol formed	53.80

Figure 3

The percentage yield is calculated using

$$\text{percentage yield} = \frac{\text{actual yield}}{\text{theoretical yield}} \times 100$$

(i) State the meanings of the terms **actual yield** and **theoretical yield**.

(2)

actual yield

theoretical yield

- (ii) Use the information in Figure 3 to calculate the percentage yield of ethanol in this experiment.

(2)

percentage yield =

- (iii) State **two** reasons why the actual yield of a reaction is usually less than the theoretical yield.

(2)

1

2

- (b) The balanced equation for the fermentation of sucrose is

- (i) Calculate the atom economy of this reaction to produce ethanol.

Give your answer to two significant figures.

(relative formula masses: $\text{C}_{12}\text{H}_{22}\text{O}_{11} = 342$, $\text{H}_2\text{O} = 18$, $\text{C}_2\text{H}_5\text{OH} = 46$, $\text{CO}_2 = 44$)

(3)

atom economy =%

5 When copper sulfate solution is electrolysed using copper electrodes, the mass of each electrode changes.

- (a) Draw a labelled diagram to show the apparatus that can be used to electrolyse copper sulfate solution using copper electrodes.

(2)

- (b) Before the electrolysis is carried out, the mass of each electrode is determined.

Explain what should be done to the copper electrodes before their masses are determined.

(2)

- (c) Figure 4 shows the results obtained from an electrolysis experiment when copper sulfate solution was electrolysed for 10 minutes.

	electrodes	
	anode	cathode
mass of electrode before electrolysis in g	6.43	6.17
mass of electrode after electrolysis in g	5.62	6.95
change in mass in g	– 0.81	+ 0.78

Figure 4

- (i) Explain, in terms of ions, the changes in mass of the two electrodes shown in the results in Figure 4.

(3)

- (ii) The electrolysis was repeated using another pair of copper electrodes of the same masses.

Explain a change that could be made to the electrolysis experiment to cause the mass of the cathode to increase by 2.34 g in 10 minutes.

- 6 The method used to extract a metal from its ore depends on the position of the metal in the reactivity series.

(a) Aluminium is extracted from its ore by electrolysis.

Explain why this method is used to extract aluminium from its ore.

(2)

- (b) (i) One step in the extraction of titanium metal involves the displacement reaction between titanium chloride, TiCl_4 , and magnesium.

This equation can be simplified as

Explain why this displacement reaction can be described as a redox reaction.

(3)

- (ii) The formula of the sulfate ion is SO_4^{2-} .

Which of the following is the formula of titanium sulfate containing the Ti^{4+} ion?

(1)

- ☐ **A** TiSO_4
- ☐ **B** Ti_2SO_4
- ☐ **C** $\text{Ti}(\text{SO}_4)_2$
- ☐ **D** $\text{Ti}_2\text{S}_2\text{O}_8$

- (c) Phytoextraction is an alternative biological method that can be used to extract metals from very low-grade ores.

Give **one** disadvantage of phytoextraction as a method of extraction of metals.

(1)

- (d) Copper is low down in the reactivity series and can be obtained from copper oxide.

Devise a simple method to obtain a sample of copper from copper oxide in the laboratory.

(2)

(Total for Question 6 = 9 marks)

- 7 The volume of dilute sulfuric acid required to neutralise 25.0 cm^3 of ammonia solution can be found by titration.

In the titration, a few drops of methyl orange indicator were added to the ammonia solution in a conical flask before adding the dilute sulfuric acid.

- (a) State the change in colour of the methyl orange at the end point when the ammonia solution has just been neutralised.

(2)

from to

- (b) When the ammonia solution was neutralised by the dilute sulfuric acid, a solution of ammonium sulfate was formed.

Complete the balanced equation for the reaction between ammonia solution and sulfuric acid.

(2)

- (c) The titration was repeated to obtain a mean volume of dilute sulfuric acid required to neutralise the 25.0 cm^3 of ammonia solution.
The volumes of the two solutions were measured accurately.

Explain **two** other practical steps that should be used in the titration to ensure that an accurate titre volume is obtained.

(4)

1

.....

.....

.....

2

.....

.....

.....

- (d) The mean volume of dilute sulfuric acid required to neutralise the ammonia solution was determined from the results of the titration.

This volume of dilute sulfuric acid was added to 25.0 cm^3 of ammonia solution in a conical flask.

Devise a plan to produce a sample of dry ammonium sulfate from the contents of the conical flask.

(3)

(Total for Question 7 = 11 marks)

- 8 (a) Bromine is a liquid at room temperature and vaporises readily. Bromine has a simple molecular structure.

Which row of the table shows the most likely melting and boiling points of bromine?

(1)

	melting point in °C	boiling point in °C
<input type="checkbox"/> A	-70	-6.3
<input type="checkbox"/> B	-17	6.3
<input type="checkbox"/> C	-7	63
<input type="checkbox"/> D	17	630

- (b) Part of the structure of graphene is shown in Figure 5.

Figure 5

Explain why graphene will be a good conductor of an electric current.

(3)

.....

.....

.....

.....

.....

.....

(c) Part of the structure of potassium chloride is shown in Figure 6.

Figure 6

Potassium chloride has a melting point of 770°C .

Explain why potassium chloride has a high melting point.

(2)

.....

.....

.....

.....

*(d) A molecule of methane can be represented in several different ways as shown in Figure 7.

These representations have been labelled **A–E** to assist you in your answer.

A	B	C	D	E
CH ₄				

Figure 7

Describe what information can be obtained from each representation including the limitations of these representations of methane.

(Total for Question 8 = 12 marks)

- 9 (a) A student carried out an investigation to determine the order of reactivity of four metals, **W**, **X**, **Y** and **Z**.

A piece of metal **W** was added to a test tube containing excess dilute hydrochloric acid.

This was repeated with the other three metals, **X**, **Y** and **Z**.

In each case, the size of each piece of metal was the same.

The student recorded observations on each reaction for three minutes.

The observations obtained are shown in Figure 8.

metal	observations with dilute hydrochloric acid
W	Bubbles formed quickly with some metal remaining after three minutes.
X	A few bubbles were seen to form. The metal looked unchanged after three minutes.
Y	Bubbles formed quickly. After three minutes all the metal had reacted.
Z	Bubbles formed very quickly with no metal remaining after three minutes.

Figure 8

- (i) Use the information in Figure 8 to place the metals in order of reactivity from the least reactive to the most reactive.

(2)

least reactive \longrightarrow most reactive

--	--	--	--

- (ii) The experiment was repeated using an excess of dilute sulfuric acid in place of the dilute hydrochloric acid.

When metal **Y** reacts with dilute sulfuric acid, bubbles form quickly at first and then the reaction stops.

Most of the solid metal remains.

Explain why the reaction between metal **Y** and excess dilute sulfuric acid stopped even though there was solid metal **Y** left.

(2)

.....

.....

.....

.....

- (iii) The reactions between metals and dilute ethanoic acid are slower than reactions between metals and dilute hydrochloric acid.
This is because ethanoic acid is a weak acid.

Explain the meaning of the term **weak acid**.

(2)

- (b) The formula of aluminium sulfate is $\text{Al}_2(\text{SO}_4)_3$.

Calculate the total number of atoms that combine to form 5.13 g of aluminium sulfate.

(relative atomic masses: O = 16.0, Al = 27.0, S = 32.0

Avogadro number = 6.02×10^{23})

(4)

number of atoms =

BLANK PAGE

10 When hydrogen is removed from an alkane, an alkene is formed.

This is an example of a dehydrogenation reaction.

(a) Under certain conditions the dehydrogenation of propane forms propene and a dynamic equilibrium is reached.

(i) State what is meant by dynamic in this context.

(1)

* (ii) The equation for this equilibrium reaction is

The forward reaction takes in heat energy and is endothermic.
A manufacturer produces large quantities of propene using this equilibrium reaction.

Suggest, with explanations, suitable conditions that the manufacturer could use to maximise the yield and rate of production of propene from propane.

(6)

DO NOT WRITE IN THIS AREA
